

Business Requirements Document (BRD)

Project: S/4HANA Finance Analytics**Author:** Junior SAP Business Analyst**Date:** August 2026**Version:** v2.0

1. Business Problem

Global Enterprise Holdings Inc. currently suffers from fragmented financial data across its six operating entities (US01, DE01, GB01, JP01, FR01, CA01). Management lacks real-time visibility into operational performance, invoice clearing status (specifically tracking the 9,952 open items and 2,431 partially paid invoices from our 50,000-record baseline dataset), and multidimensional profitability (Revenue vs. Expense allocations across Cost Centers and Profit Centers). This manual reporting structure leads to delayed month-end closes and heightened working capital risks.

Baseline Context: This document codifies requirements derived from analysis of 50,000 Universal Journal (ACDOCA) posting records covering Fiscal Years 2024–2026, totaling over \$50.3M in revenue and \$102.8M in expenses.

2. Current Process (As-Is)

- **Data Extraction:** Regional finance teams manually extract GL balances and sub-ledger line items using disparate SAP GUI transactions (e.g., FBL1N, FBL5N, FAGLL03) into offline spreadsheets.
- **Reconciliation Work:** Financial analysts spend 5–7 days per month reconciling General Ledger (FI) postings with Controlling (CO) cost center and profit center allocations due to lack of unified real-time tables.
- **Payment Tracking:** Accounts receivable aging is updated on a weekly batch schedule, resulting in delayed follow-ups on open and partially paid invoices.
- **Reporting Latency:** Executive leadership receives consolidated financial reports 12 business days after month-end close.

3. Future Process (To-Be)

- **Unified Universal Journal Architecture:** Automatic real-time integration of FI and CO line items via SAP S/4HANA ACDOCA table structures, eliminating manual reconciliation.
- **Real-Time Analytics Dashboards:** Automated Fiori-based analytics offering instant drill-down capabilities by Company Code, Profit Center, Business Area, and Vendor/Customer dimensions.
- **Automated Clearing & Status Monitoring:** Real-time tracking of Payment Status (Cleared, Open, Partially Paid) linked directly to Document Types (KR, DZ, SA, RE, DR, RV).
- **Accelerated Close Cycle:** Month-end reporting available within 3 business days of period-end close.

4. Business Scope

Module / Area	In-Scope Items	Out-of-Scope
General Ledger (FI-GL)	Chart of Accounts, Journal Entries, Document Types, Tax Postings, Multi-Currency Translation	Legacy archive data prior to FY2024
Accounts Payable / Receivable (FI-AP / FI-AR)	Vendor and Customer master data, invoice posting, payment tracking, open item management	Third-party external banking gateway integrations
Controlling (CO)	Cost Center Accounting, Profit Center Accounting, Business Area profitability tracking	Advanced production costing / Material Ledger revaluations

5. Stakeholders

Role / Title	Department	Project Responsibility
Chief Financial Officer (CFO)	Executive Leadership	Executive Sponsor, final approval of strategic KPIs and budget.
Global Controller	Corporate Finance	Process owner for GL, financial reporting standards, and compliance.
Treasury Manager	Treasury & Cash Management	Owner of AR/AP clearing workflows, cash flow metrics, and working capital.
Senior SAP Business Analyst	IT / Enterprise Applications	Lead solution architect, functional design, and data model validation.
Junior SAP Business Analyst	IT / Enterprise Applications	Requirements gathering, functional specifications authoring, and test script execution.

6. Functional Requirements

Req ID	Requirement Description	SAP Module / Table	Priority
FR-01	System must capture and store multi-currency financial postings across all six company codes with real-time currency conversion.	FI-GL / ACDOCA	High (Mandatory)
FR-02	Dashboard must display real-time breakdown of invoice payment statuses (Cleared, Open, Partially Paid) with drill-down to document numbers.	FI-AP / FI-AR	High (Mandatory)
FR-03	System must automatically calculate Profit, Revenue, and Expense figures based on assigned GL Account categories.	FI-GL / CO	High (Mandatory)

Req ID	Requirement Description	SAP Module / Table	Priority
FR-04	Enable multidimensional filtering by Cost Center (CC_100 to CC_500) and Profit Center across all financial reports.	CO-OM / PCA	Medium

7. Non-Functional Requirements

NFR ID	Requirement Description	Performance Standard
NFR-01	Performance & Latency: Analytics dashboard reports utilizing 50,000+ line item datasets must render within 3 seconds.	< 3 seconds response time
NFR-02	Security & Authorization: Strict role-based access control (RBAC) ensuring regional finance users only view authorized Company Codes.	SAP PFCG Role restriction
NFR-03	Scalability: Architecture must support annual transaction growth of up to 25% without performance degradation.	HANA In-Memory optimization
NFR-04	Auditability: Complete immutable change logs for all financial document postings and reversals.	SOX & IFRS compliance ready

8. Business Rules

- **BR-01:** An invoice cannot be posted without a valid Company Code, Document Type (KR, DR, SA, RE, DR, RV), and matching GL Account category.
- **BR-02:** Payment Amount cannot exceed the total Invoice Amount including Tax Amount unless a formal credit memo or overpayment document is referenced.
- **BR-03:** Revenue GL accounts (e.g., 400000, 410000) must always map to positive profit contributions, whereas Expense GL accounts (e.g., 500000 to 530000) must offset operating profit.
- **BR-04:** Balance sheet accounts (Cash, AR, AP, Retained Earnings) are treated as neutral for direct operational P&L attribution but tracked in working capital metrics.

9. Success Metrics

Metric	Baseline (Current)	Target (Post-Implementation)
Month-End Close Duration	12 Business Days	< 3 Business Days
Open Item Receivables Backlog	24.8% of total volume	< 12.0% of total volume
FI-CO Reconciliation Time	5–7 Days / month	0 Days (Real-time ACDOCA integration)
Reporting User Adoption	35% (Spreadsheet reliant)	95% active adoption on SAP Fiori analytics
