

Functional Requirements Document (FRD)

Project: S/4HANA Finance Analytics **Author:** Junior SAP Business Analyst **Date:** August 2026 **Version:** v2.1

1. Document Overview & Purpose

This Functional Requirements Document (FRD) translates high-level financial objectives into precise, executable functional specifications for the SAP S/4HANA Finance Analytics dashboard suite. Grounded in the 50,000-record Universal Journal (ACDOCA) dataset spanning six global operating entities (US01, DE01, GB01, JP01, FR01, CA01), this document outlines the required dashboard layouts, interactive filters, core KPIs, visual charts, user stories, acceptance criteria, and governance business rules.

Author Note: Prepared by the Junior SAP Business Analyst to guide ABAP developers, Fiori UI/UX designers, and QA test leads in building compliant analytical applications.

2. Dashboard Requirements

The solution requires three distinct SAP Fiori analytical dashboards tailored for corporate controllers, regional finance leads, and treasury managers:

- **Executive Overview Dashboard:** High-level financial posture showing total revenues (\$50.3M), expenses (\$102.8M), net operating profit, and global entity comparisons.
- **Working Capital & Clearing Dashboard:** Detailed tracking of invoice payment statuses (Cleared [37,617 items], Open [9,952 items], Partially Paid [2,431 items]) to optimize Days Sales Outstanding (DSO).
- **Profitability & Cost Center Drill-Down:** Multidimensional P&L breakdown by Cost Center (CC_100 to CC_500), Profit Center, and Business Area.

3. Key Performance Indicators (KPIs)

KPI Name	Calculation Logic / Formula	Target / Threshold
Total Revenue	Sum of Revenue where GL Category = Revenue	Real-time accumulation
Total Operating Expense	Sum of Expense where GL Category = Expense	Monitored against budget variance
Invoice Clearing Velocity	(Count of Cleared Items / Total Invoices) * 100	> 80.0%
Open Exposure Ratio	(Sum of Open Invoice Amounts / Total Invoice Amount) * 100	< 15.0%

4. Charts & Visualizations

Chart Name	Chart Type	Data Dimensions & Metrics
Global Revenue by Entity	Bar Chart	X-Axis: Company Code / Country Y-Axis: Sum of Revenue
Payment Status Distribution	Donut Chart	Segments: Cleared (75.2%), Open (19.9%), Partially Paid (4.9%)
Monthly Financial Trajectory	Multi-Line Trend	X-Axis: Posting Date (Monthly) Lines: Revenue vs. Expense
Cost Center Allocation Matrix	Stacked Column	X-Axis: Cost Centers (CC_100 – CC_500) Metric: Expense Amount

5. Global Dashboard Filters

To enable flexible ad-hoc analysis, the dashboards must support the following global multi-select filters:

- **Company Code / Country:** US01, DE01, GB01, JP01, FR01, CA01.
- **Fiscal Year & Posting Date Range:** Dynamic date picker covering FY2024–2026.
- **Document Type:** Filter by KR (Vendor Invoice), DZ (Customer Payment), SA (General Posting), RE (Invoices), DR (Customer Invoice), RV (Billing).
- **Payment Status:** Checkbox filter for Cleared, Open, Partially Paid.
- **Profit Center & Business Area:** Hierarchical tree filter for PC_CORP, PC_EAST, etc., and business areas BA01–BA04.

6. User Stories

US-01 (Executive): As a CFO, I want to view global revenue and operating expense totals across all company codes in real time so that I can assess enterprise financial health without waiting for batch reports.

US-02 (Treasury Manager): As a Treasury Manager, I want to filter and isolate all 'Open' and 'Partially Paid' invoice items with customer and vendor names so that I can prioritize collection calls and improve cash flow.

US-03 (Cost Accountant): As a Cost Accountant, I want to drill down into specific cost centers (CC_100 to CC_500) to analyze expense distribution and identify cost-overflow anomalies.

7. Acceptance Criteria

User Story Ref	Acceptance Condition	Verification Method
US-01	Dashboard loads global revenue (\$50.3M) and expense (\$102.8M) aggregates within 3 seconds of filter selection.	Automated performance test script

User Story Ref	Acceptance Condition	Verification Method
US-02	Selecting 'Open' status accurately isolates 9,952 open document line items with associated customer/vendor IDs.	SQL vs. Dashboard count comparison
US-03	Cost center filter updates all expense charts dynamically without throwing null-pointer or currency conversion errors.	Manual QA functional testing

8. Business Rules

- **BR-01 (Currency Translation):** All multi-currency transactions (USD, EUR, GBP, JPY, CAD) must be translated to group currency using standard SAP exchange rate type M on the Posting Date.
- **BR-02 (Payment Status Integrity):** An invoice item is strictly designated as 'Cleared' if Payment Amount equals Invoice Amount. Partial status applies when payment is > 0 and < invoice amount.
- **BR-03 (P&L Segregation):** Balance sheet accounts (Cash, AR, AP, Retained Earnings) must be excluded from direct operating profit calculations to prevent distortion of P&L metrics.
