

AI Financial Analytics Strategy & Predictive Architecture

1. Predictive Modeling: Revenue & Expense Forecasting

Revenue Forecasting Time-Series ML

- **Algorithm:** ARIMA / Prophet coupled with gradient-boosted decision trees (XGBoost) on historical billing data (`ACDOCA`).
- **Features:** Historical sales orders, seasonality indices, macro-economic indicators, and customer payment velocity.
- **Output:** Rolling 12-month predictive revenue bands with confidence intervals per Profit Center.

Expense Prediction Cost Behavioral AI

- **Algorithm:** Recurrent Neural Networks (LSTM) for sequential cost pattern recognition across Cost Centers (`KOSTL`).
- **Features:** Purchase requisition trends, vendor price indexing, seasonal overhead spikes, and headcount projections.
- **Output:** Automated early warning triggers for projected budget overruns prior to month-end close.

2. Liquidity & Risk Management

Cash Flow Prediction Liquidity Optimization

- **Algorithm:** Supervised regression models trained on historical customer payment behavior (`BSID`/`BSIK`).
- **Features:** DSO trends, average days to pay, discount take-rates, and pending disbursement schedules.
- **Output:** Daily and weekly net cash flow forecasts integrated directly into bank position monitors.

Invoice Risk Detection Anomaly & Default ML

- **Algorithm:** Isolation Forests and Classification Random Forests for anomaly scoring on open receivables.
- **Features:** Customer credit ratings, payment delays, disputed invoice history, and partial payment trends.
- **Output:** Real-time risk scoring (Low/Medium/High) for collections prioritization and bad debt provisioning.

3. Strategic Impact & Future Roadmap

Business Benefits Value Realization

- **Working Capital Efficiency:** 15-20% reduction in Days Sales Outstanding (DSO) via predictive collection strategies.
- **Forecast Accuracy:** Variance reduction of up to 25% in revenue and expense projections vs. manual budgeting.
- **Operational Automation:** 70% decrease in manual exception handling for invoice matching and risk assessment.

Future AI Roadmap Phased Evolution

- **Phase 1 (Months 1-6):** Data harmonization in SAP SAC/BTP; baseline predictive models for AR/AP aging.
- **Phase 2 (Months 7-12):** Autonomous anomaly detection and integration with Fiori launchpad notifications.
- **Phase 3 (Year 2+):** Generative AI co-pilots for automated financial commentary and scenario simulation.
